

Κρυπτο500

HF Multichannel COMINT - SIGINT software suite

Unequaled Decoding, Collection, Analysis, Precision Classification and RadiolD

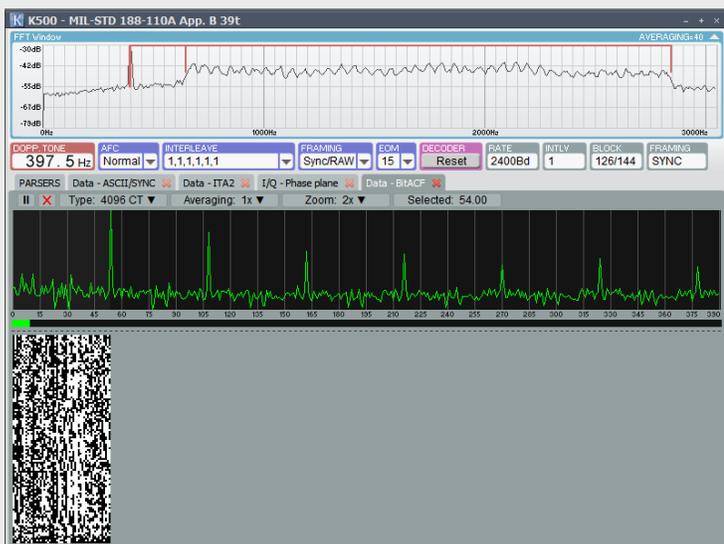

“UNPARALLELED COLLECTION OF SIGNAL DEMODULATORS AND DECODERS”

Krypto500 is for Narrowband (NB) signals up to 48 kHz in bandwidth principally found in HF. It enables even inexperienced signals analysts to quickly and accurately interpret information about a signal of interest.

No other software on the market offers as comprehensive a selection of demodulation, decoding, parsing tools and receiver control for several hundred signals and integrates those seamlessly with so many wideband, narrowband and other collection systems.

Its companion suite, Krypto1000 is for wideband signals 48 kHz and wider, principally found in VHF-UHF.

POWERFUL USER INTERFACE

Krypto500 offers an intuitive and powerful user interface and embedded intelligence to assist operators and analysts with proper collection, tuning and decoding of more than 80 short-duration calling and link-establishment protocols (ALE, ALIS, ALM and many more).

MAXIMUM INTELLIGENCE

A comprehensive set of spectrum and parametric analysis tools for external and internal measurements, identification of complex synchronization, timing and cryptographic systems.
